NextGen Hardware

Functional Front-End Interface with Use Case Descriptions

➤ Start of Registration Process

Feature: Beginning the account creation

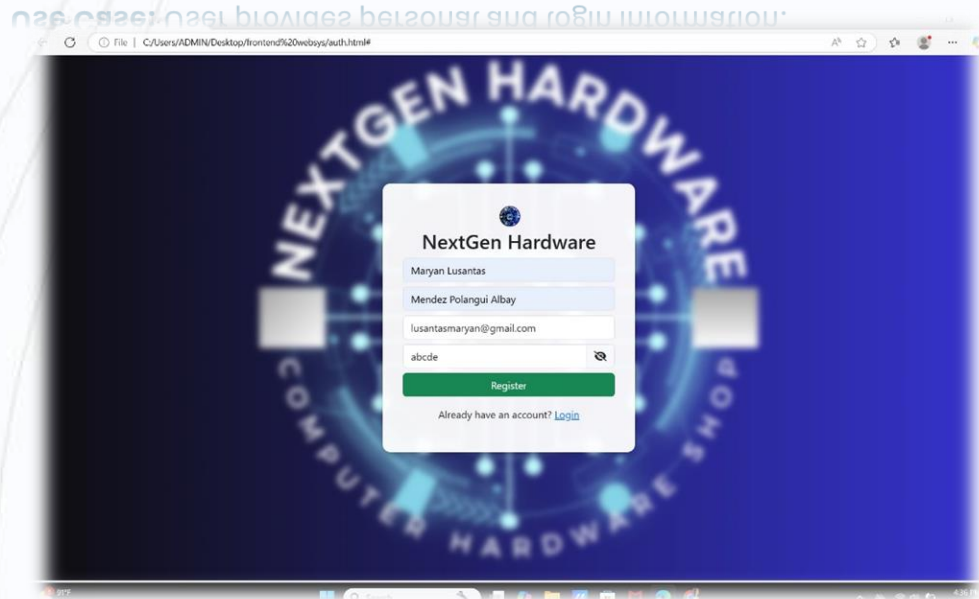

Use Case: User initiates the sign-up process through registering.

➤ Filling Out the Registration Form

Feature: Account registration

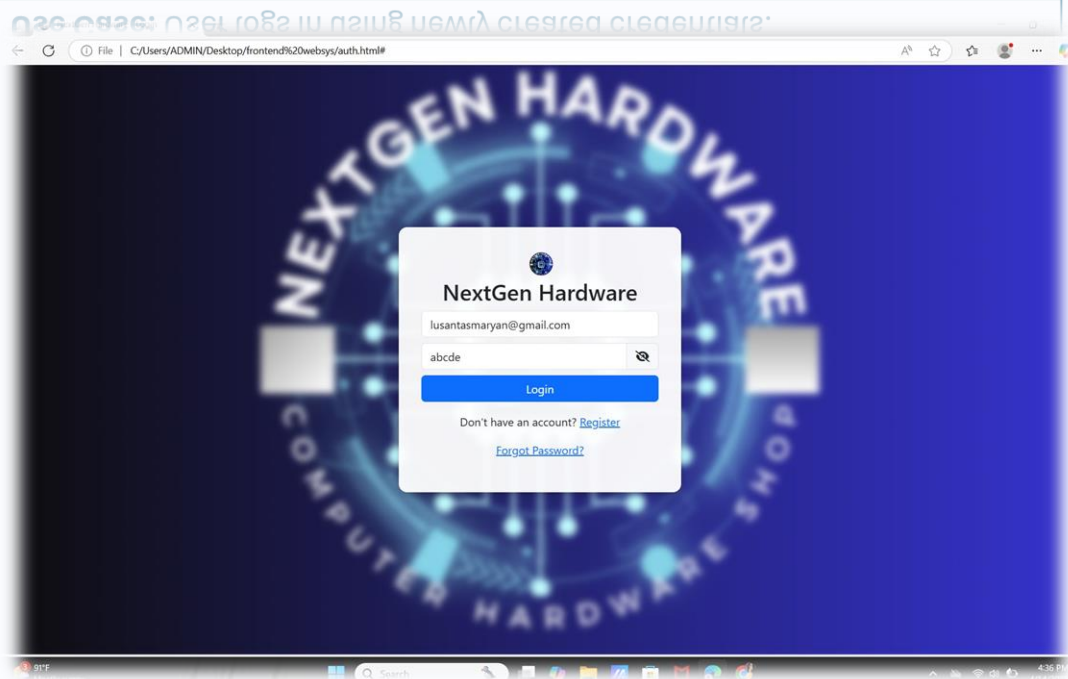

Use Case: User provides personal and login information.

➤ Successful Registration and Login

Feature: Account access

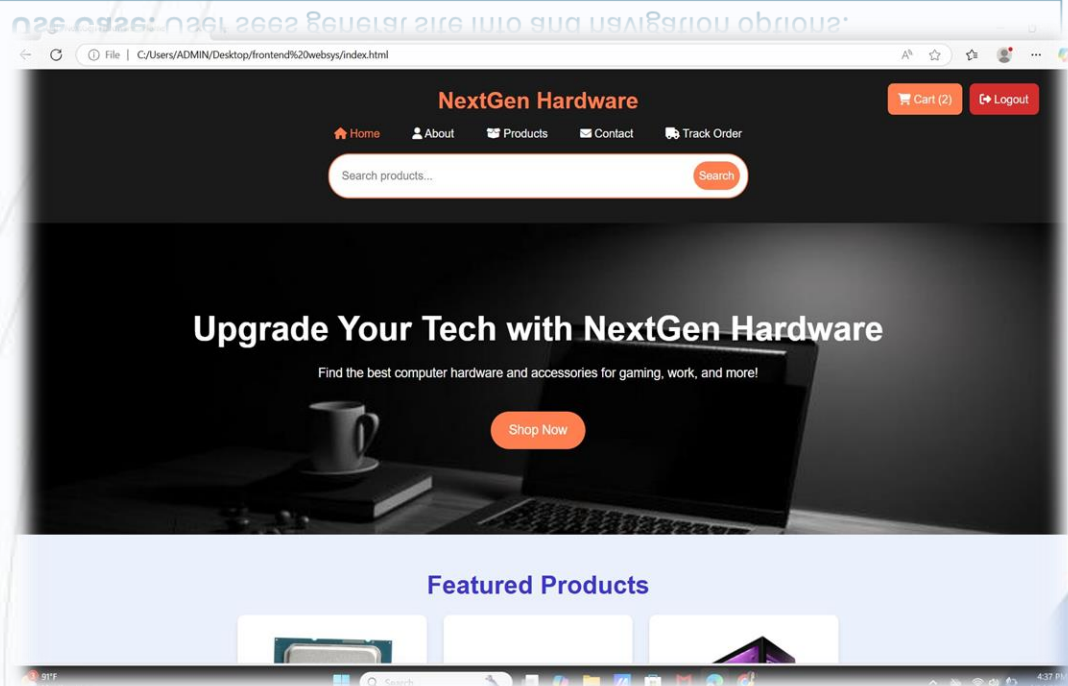

Use Case: User logs in using newly created credentials.

➤ Homepage Overview

Feature: Main landing page

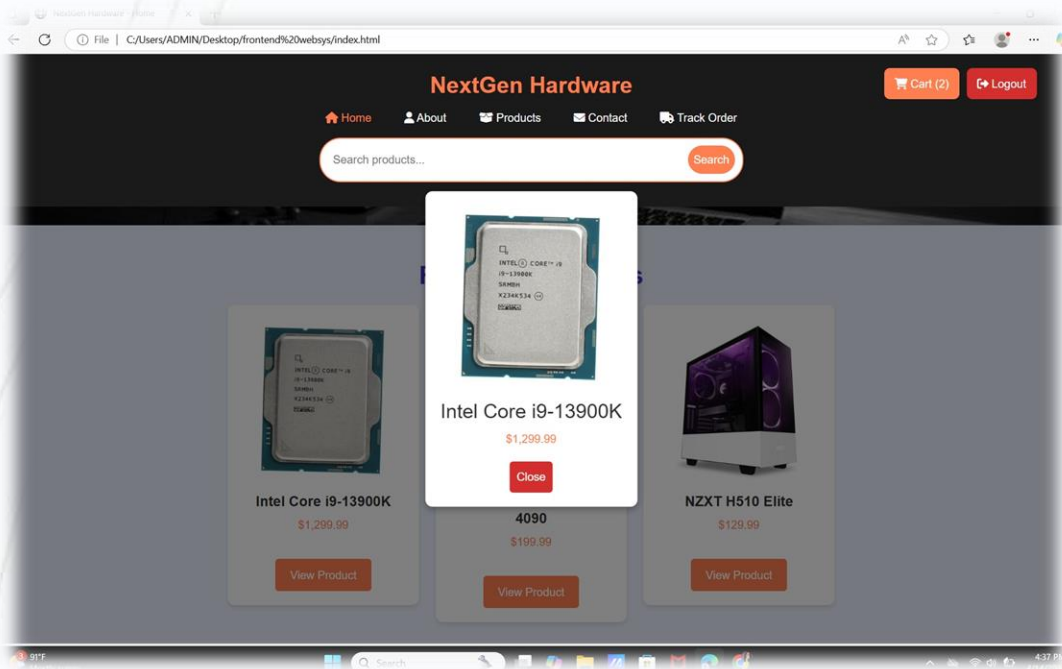

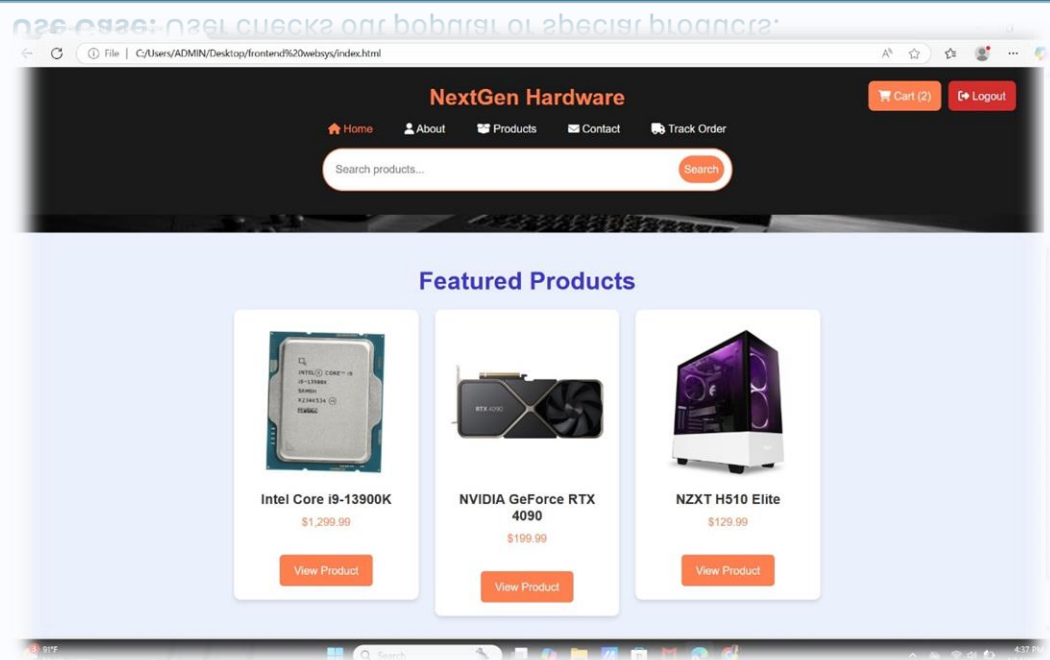

Use Case: User sees general site info and navigation options.

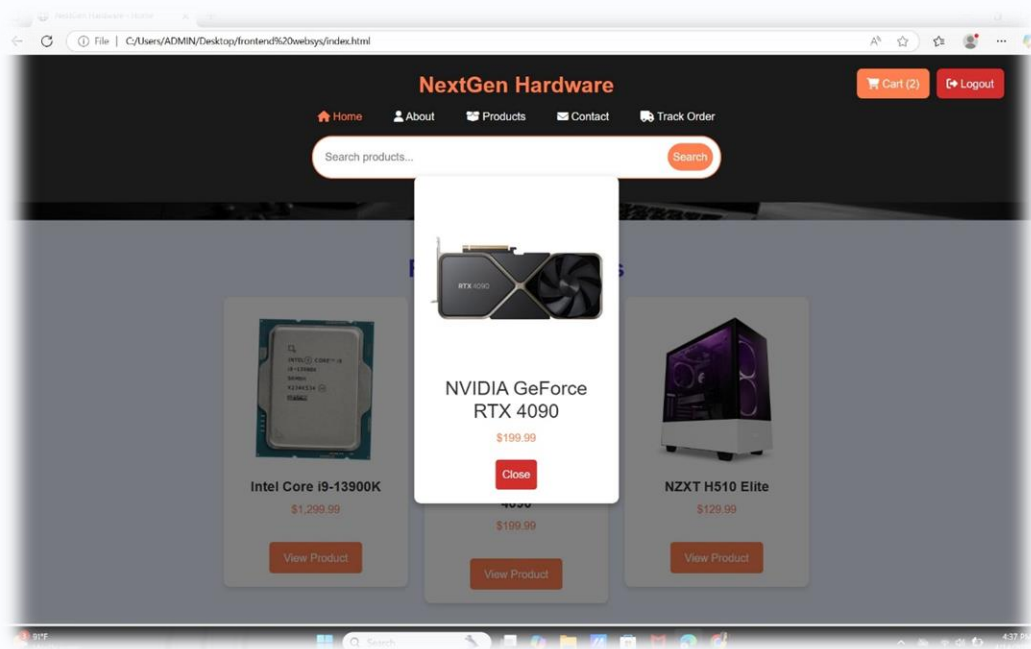

➤ Browsing Featured Products

Feature: Viewing highlighted items

Use Case: User checks out popular or special products.

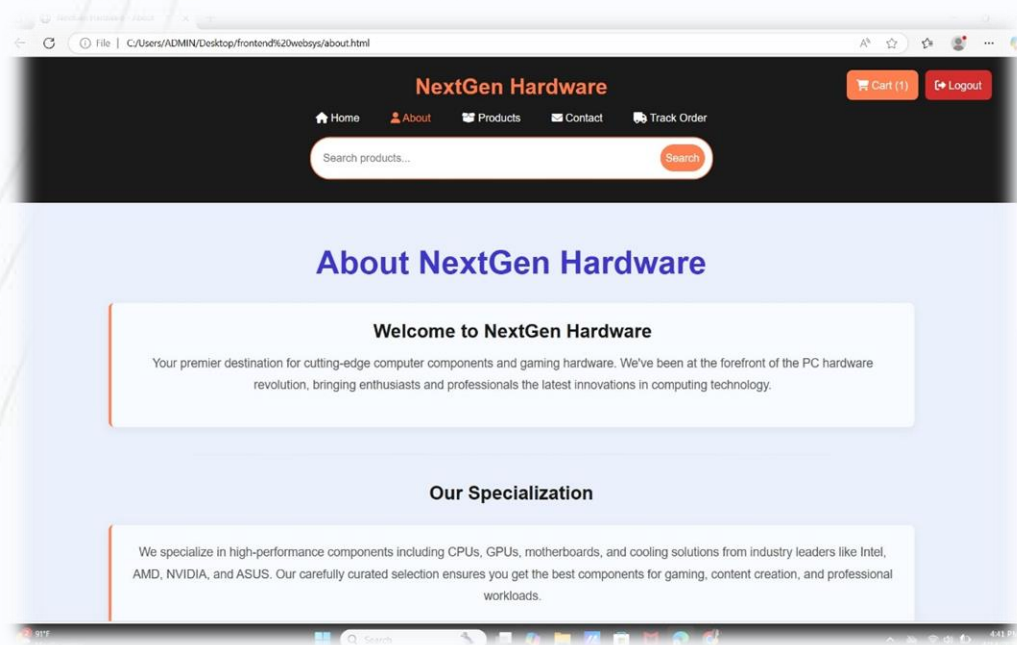

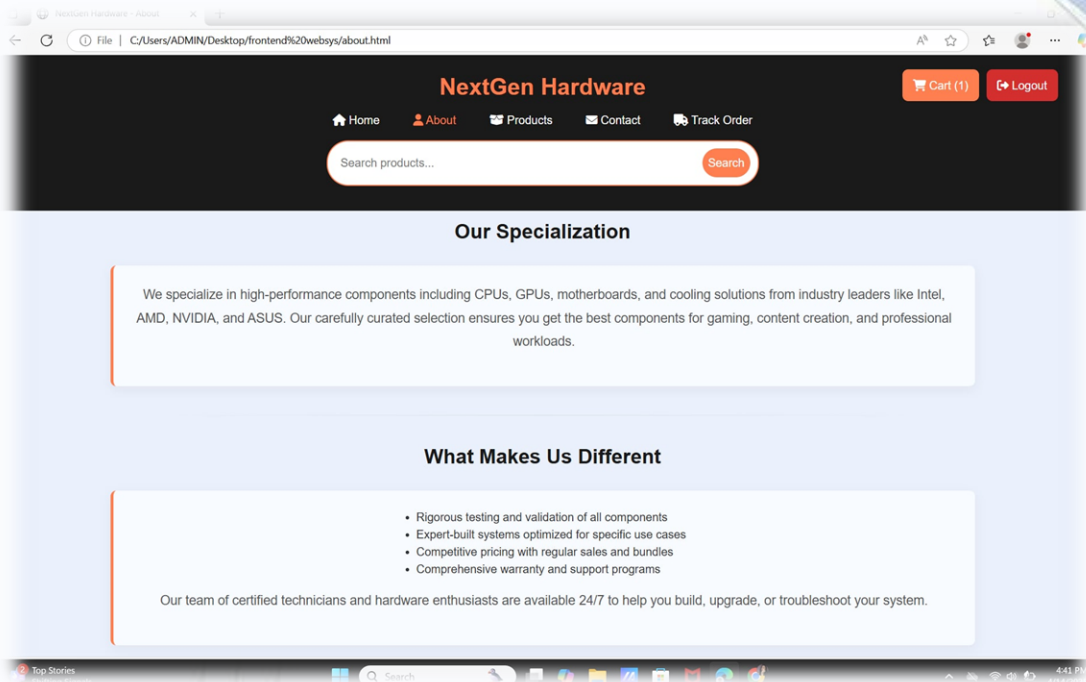

➤ Viewing the About Page

Feature: Site background information

Use Case: User reads details about the business or creators.

Use Case: User reads details about the business or creators.

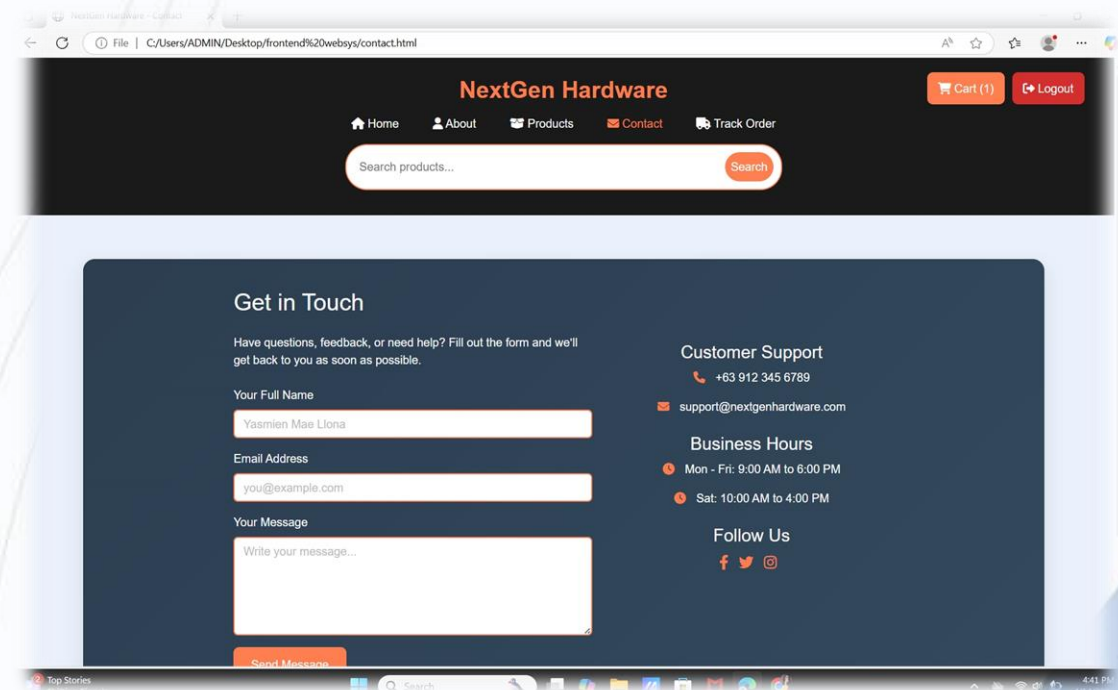

➤ Accessing the Contact Form

Feature: Customer support

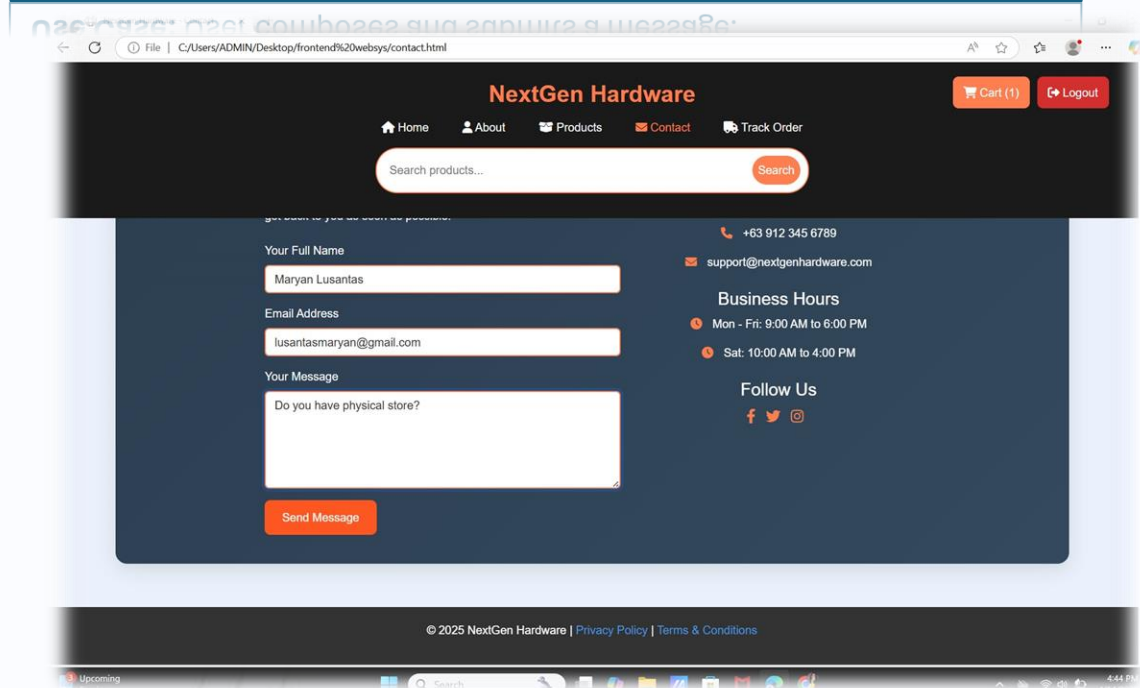

Use Case: User opens the form to send a message or inquiry

➤ Writing and Sending Message

Feature: Message form use

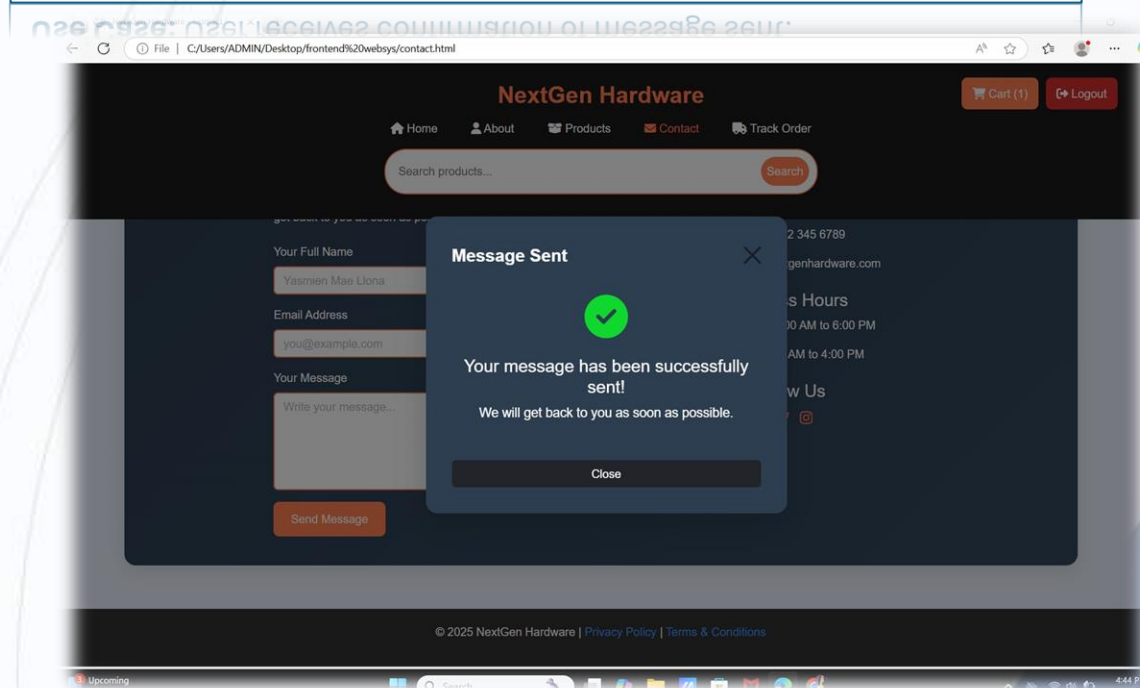

Use Case: User composes and submits a message.

➤ Message Sent Confirmation

Feature: Contact success

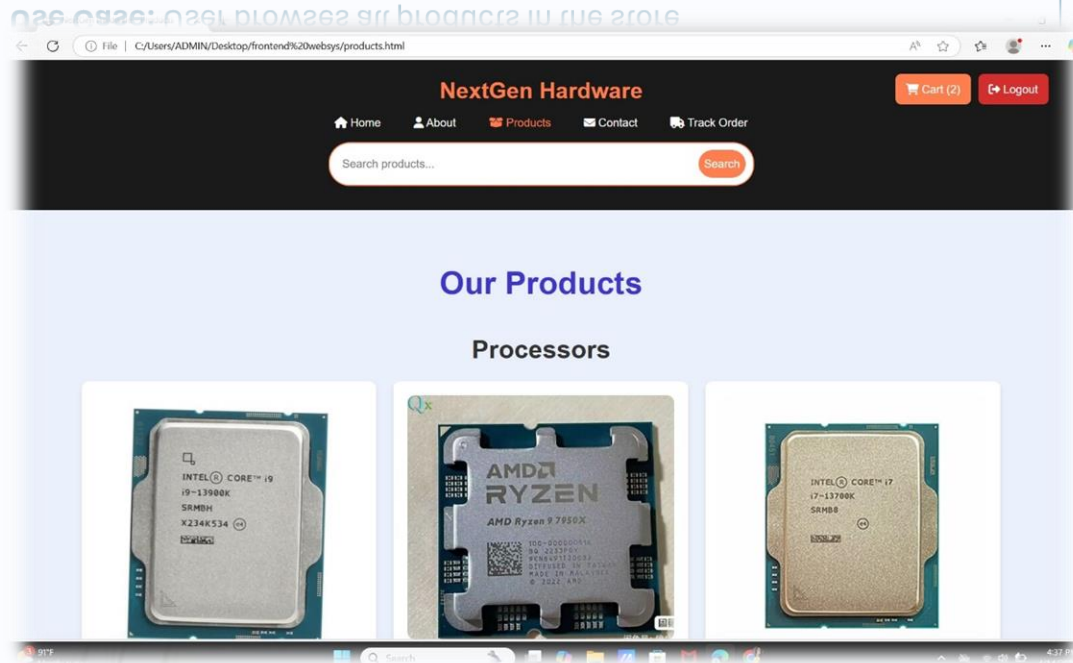

Use Case: User receives confirmation of message sent.

➤ Viewing Products Page

Feature: Viewing all available products

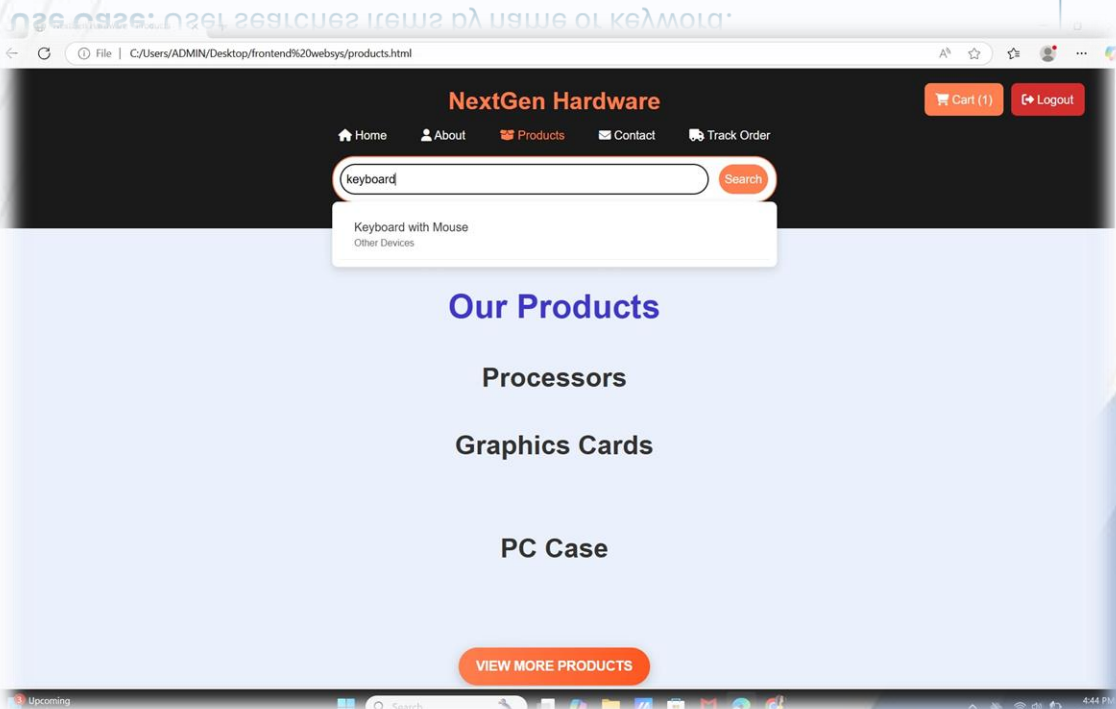

Use Case: User browses all products in the store

➤ Searching for Products

Feature: Product search

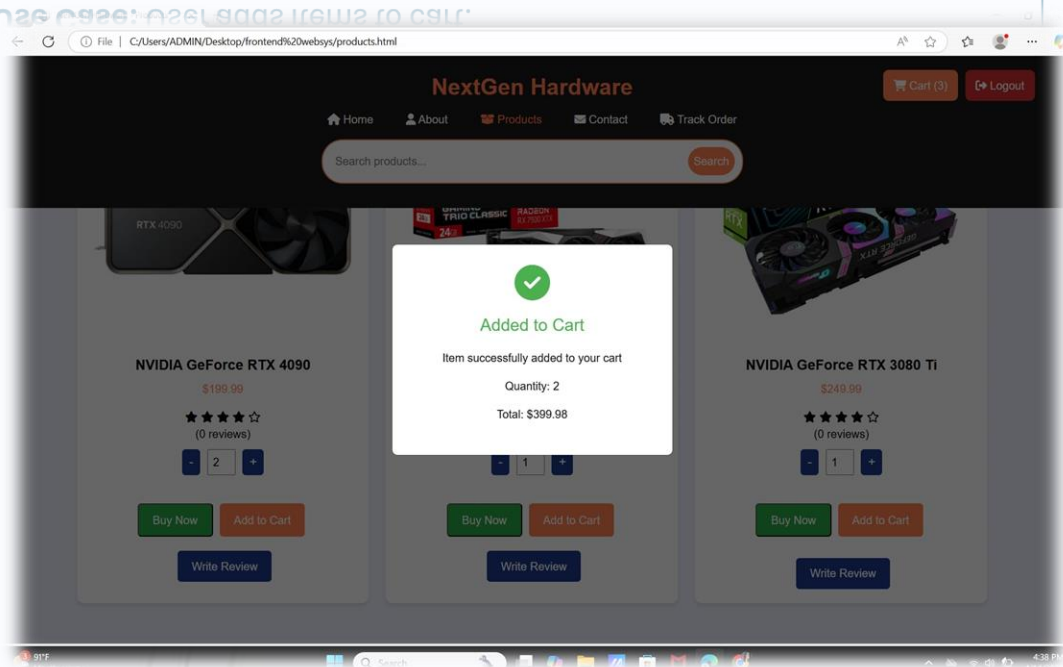

Use Case: User searches items by name or keyword.

➤ Adding Products to Cart

Feature: Cart use

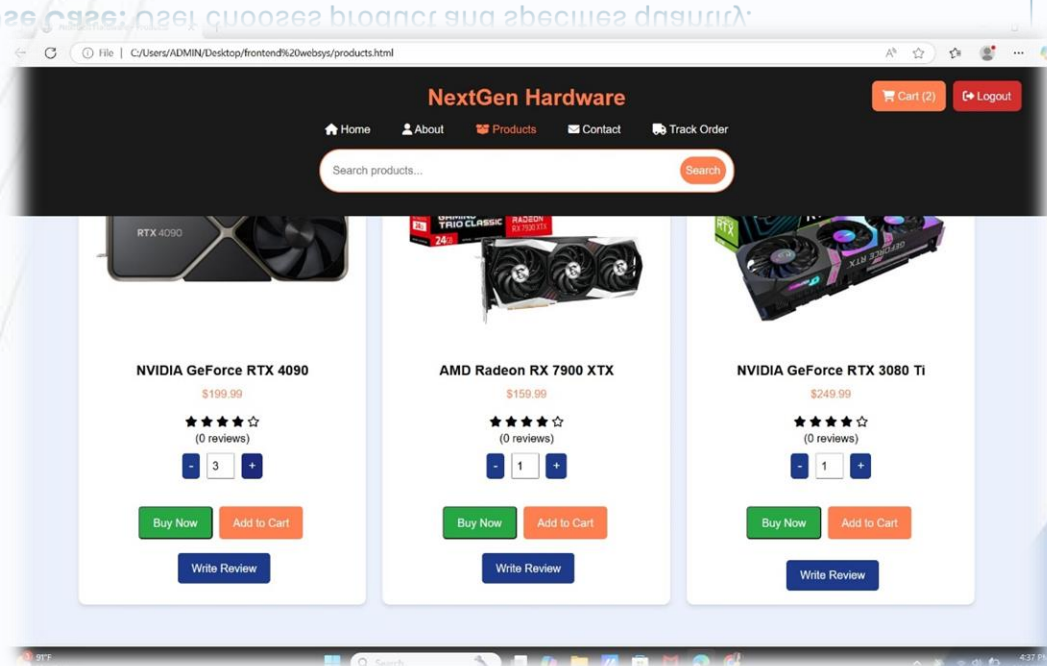

Use Case: User adds items to cart.

➤ Product Selection with Quantity Option

Feature: Selecting products

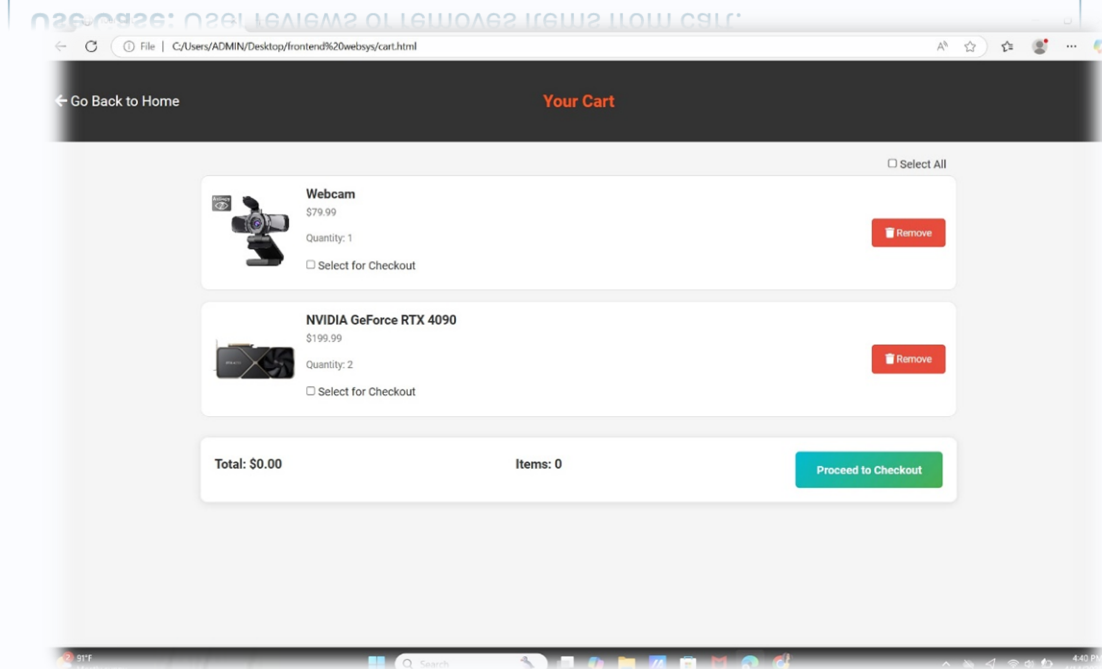

Use Case: User chooses product and specifies quantity.

➤ Viewing and Editing Cart Items

Feature: Cart content management

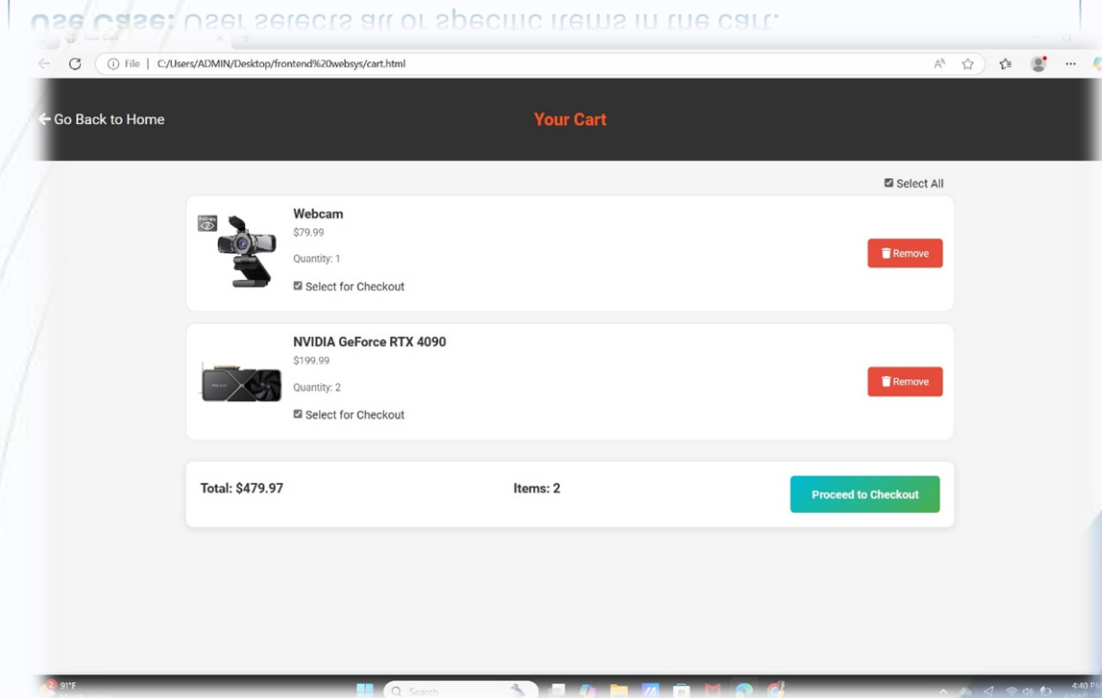

Use Case: User reviews or removes items from cart.

➤ Managing Cart Selections

Feature: Select/unselect items

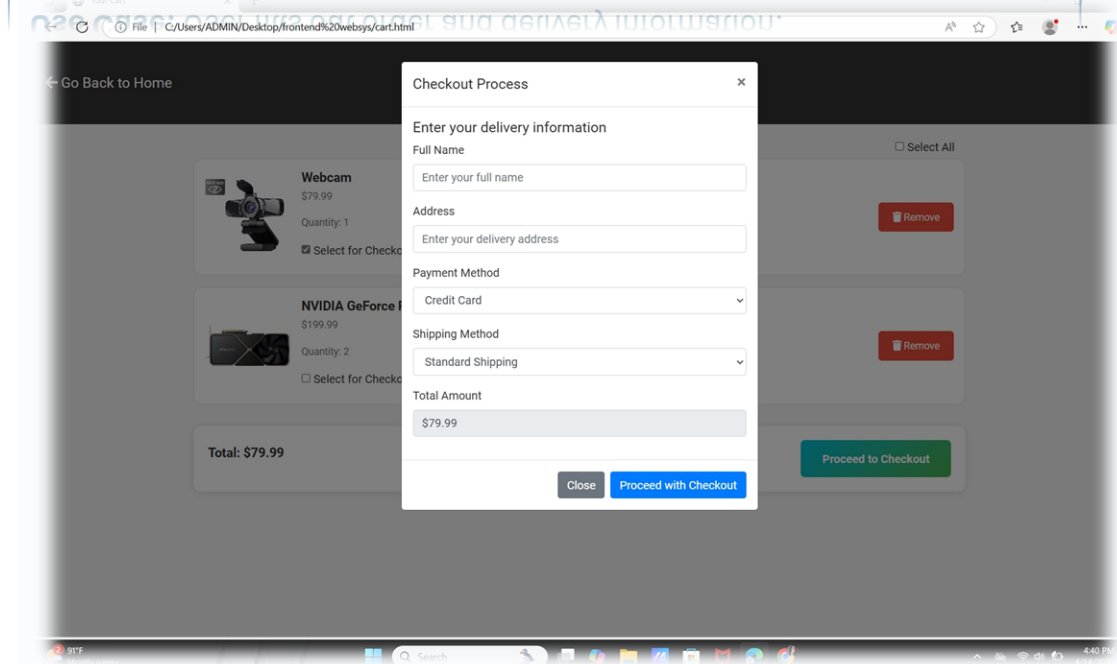

Use Case: User selects all or specific items in the cart.

➤ Purchase Form Entry

Feature: Starting checkout

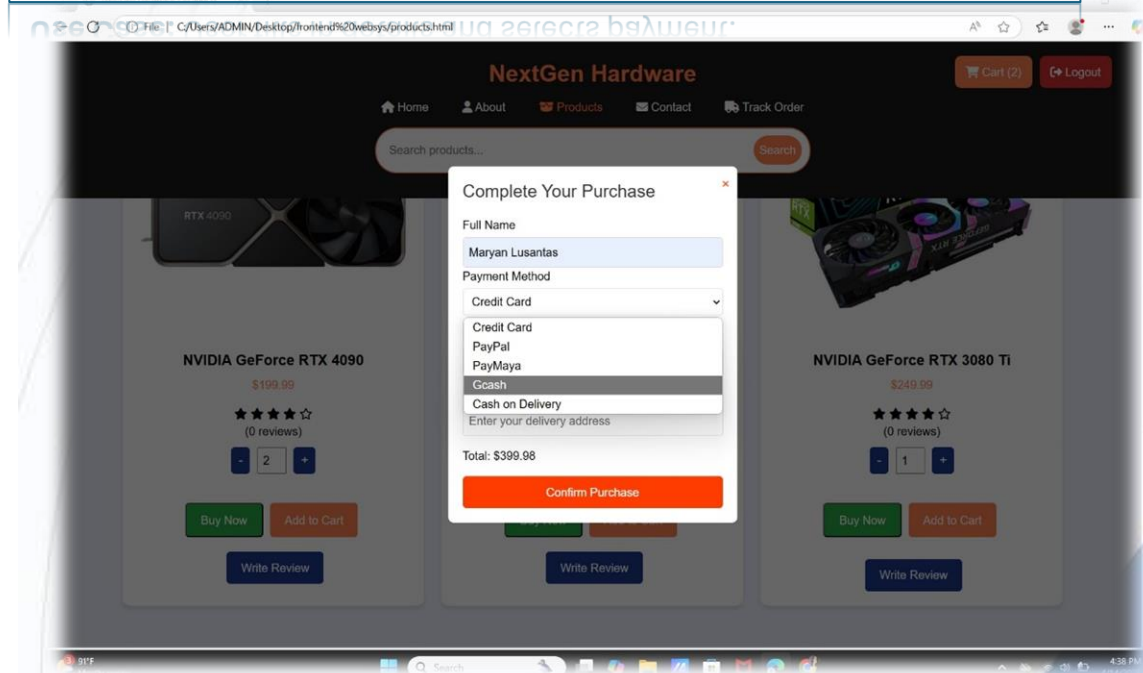

Use Case: User fills out order and delivery information.

➤ Completing the Checkout Form

Feature: Checkout details

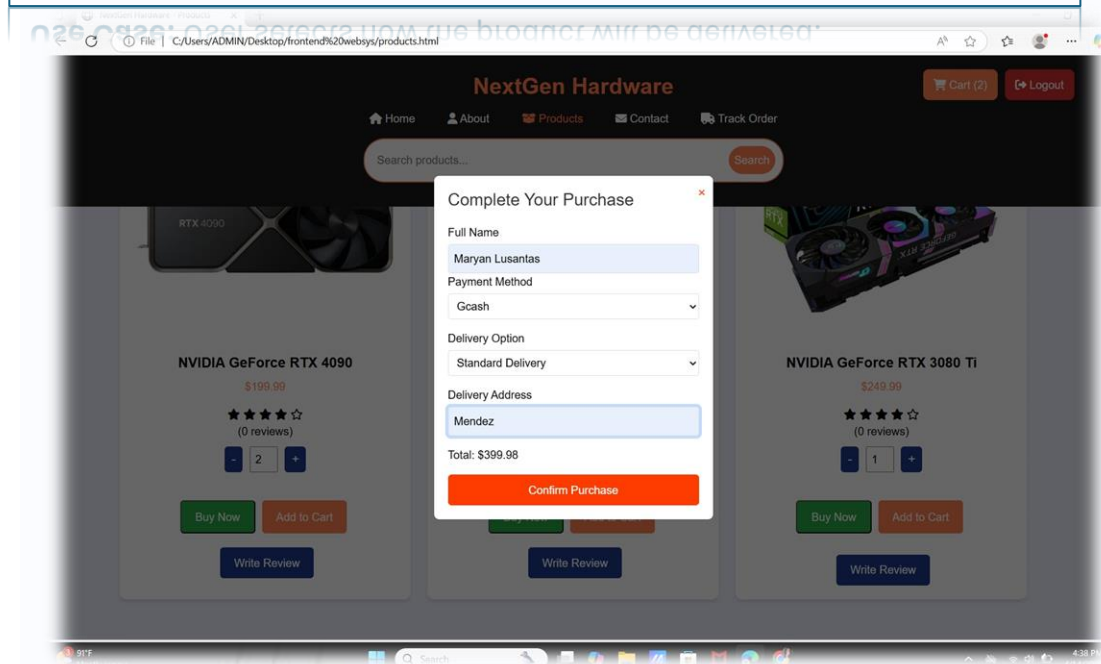

Use Case: User fills in details and selects payment.

➤ Choosing a Delivery Option

Feature: Shipping method

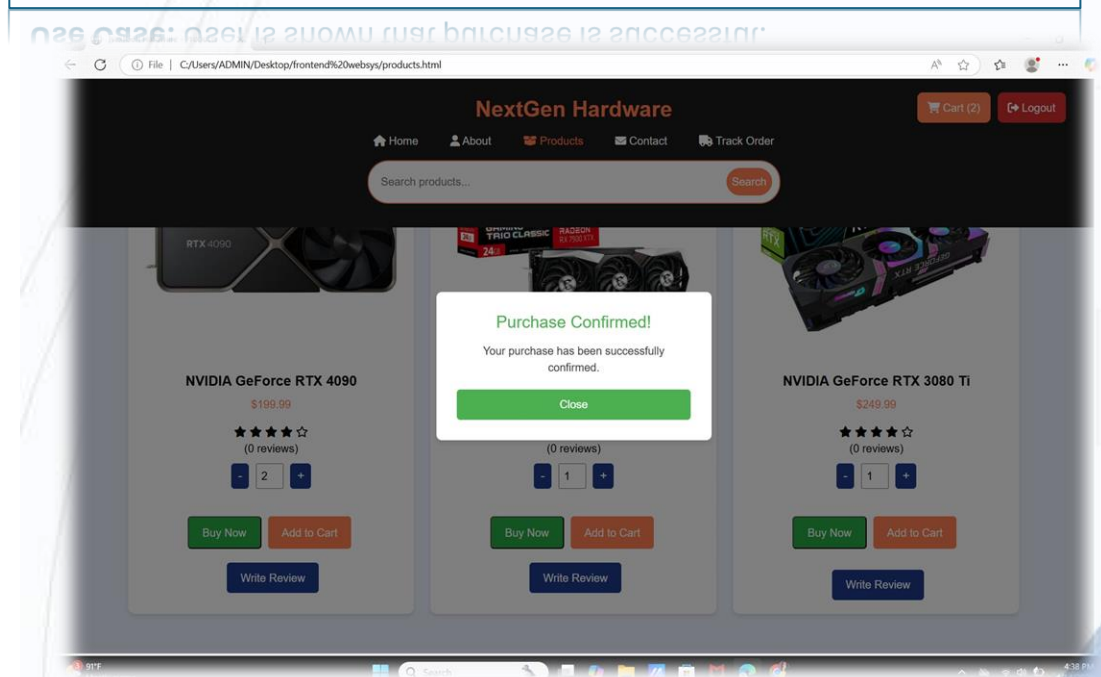

Use Case: User selects how the product will be delivered.

➤ Final Purchase Confirmation

Feature: Order success message

Use Case: User is shown that purchase is successful.

➤ Track Order Input Page

Feature: Order tracking

Use Case: User enters email and order number to check status.

The image displays two screenshots of a web application's 'Track Your Order' page. The page has a dark header with the 'NextGen Hardware' logo, navigation links (Home, About, Products, Contact, Track Order), and a shopping cart icon showing 'Cart (1)' and a 'Logout' button. A search bar is also present in the header.

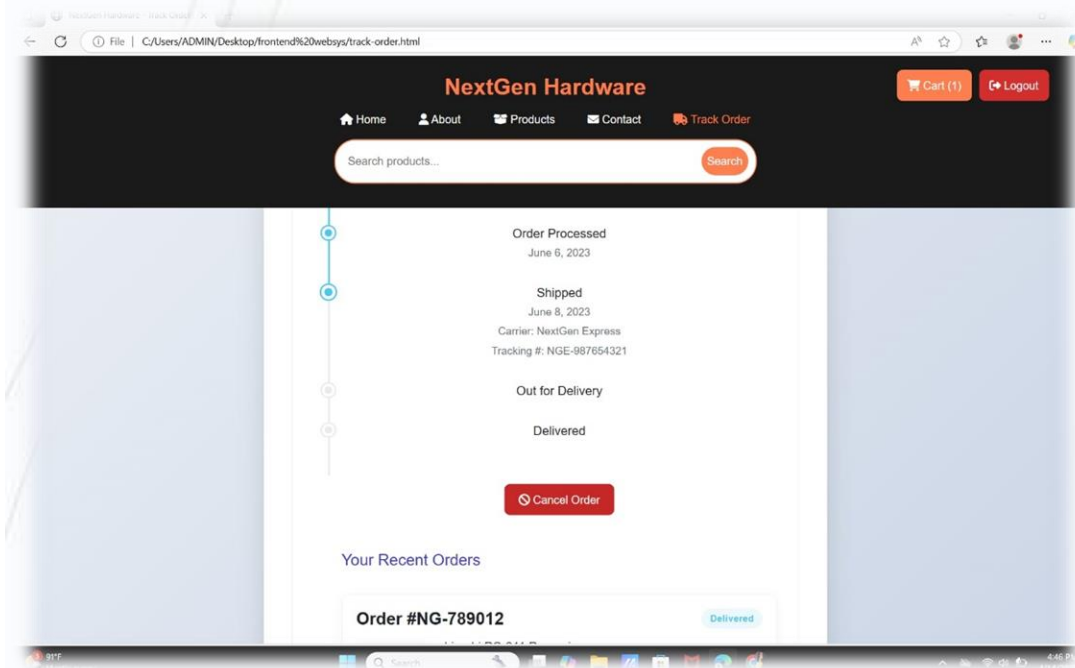

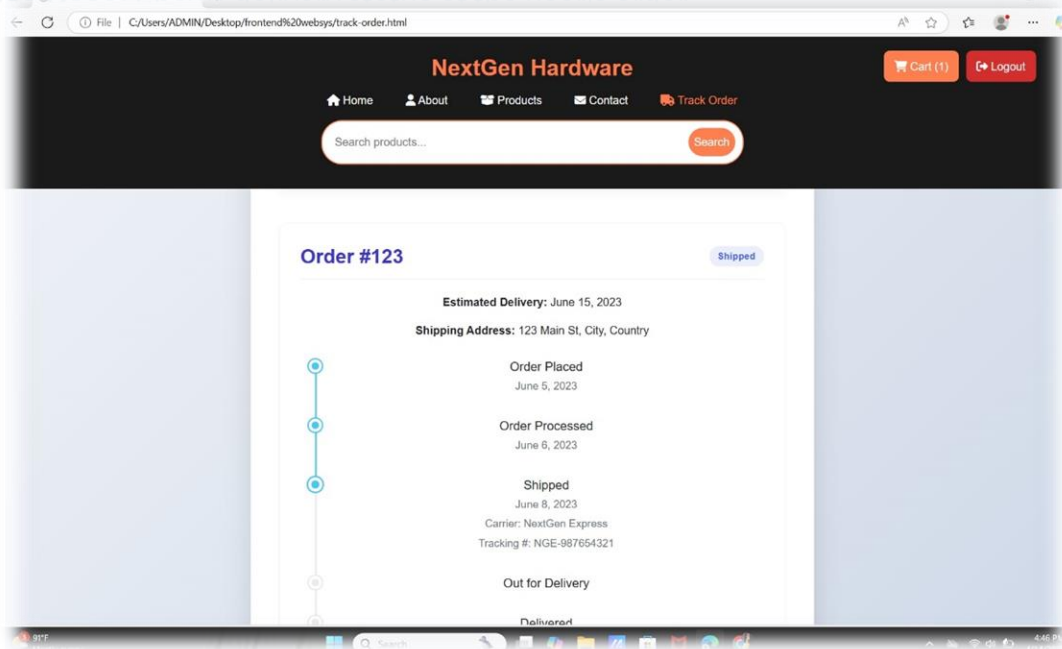

Top Screenshot: The 'Track Your Order' section features a white card titled 'Enter Order Details'. It contains two input fields: 'Order Number' with the placeholder text 'e.g. NG-123456' and 'Email Address' with the placeholder text 'email@example.com'. A blue 'Track Order' button is at the bottom of the card.

Bottom Screenshot: This screenshot shows the same form with user input. The 'Order Number' field contains '123' and the 'Email Address' field contains 'lusanasmaryan@gmail.com'. The 'Track Order' button remains at the bottom.

➤ Order Status Display

Feature: Tracking result

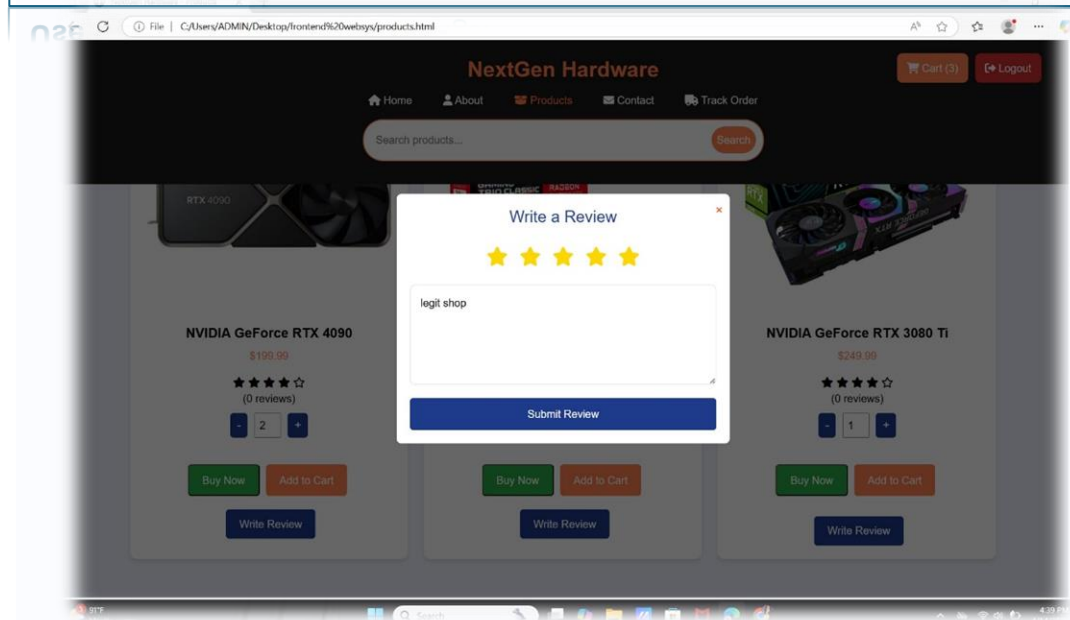

Use Case: Shows delivery status of the user's order.

➤ Rating Items Purchased

Feature: Product rating

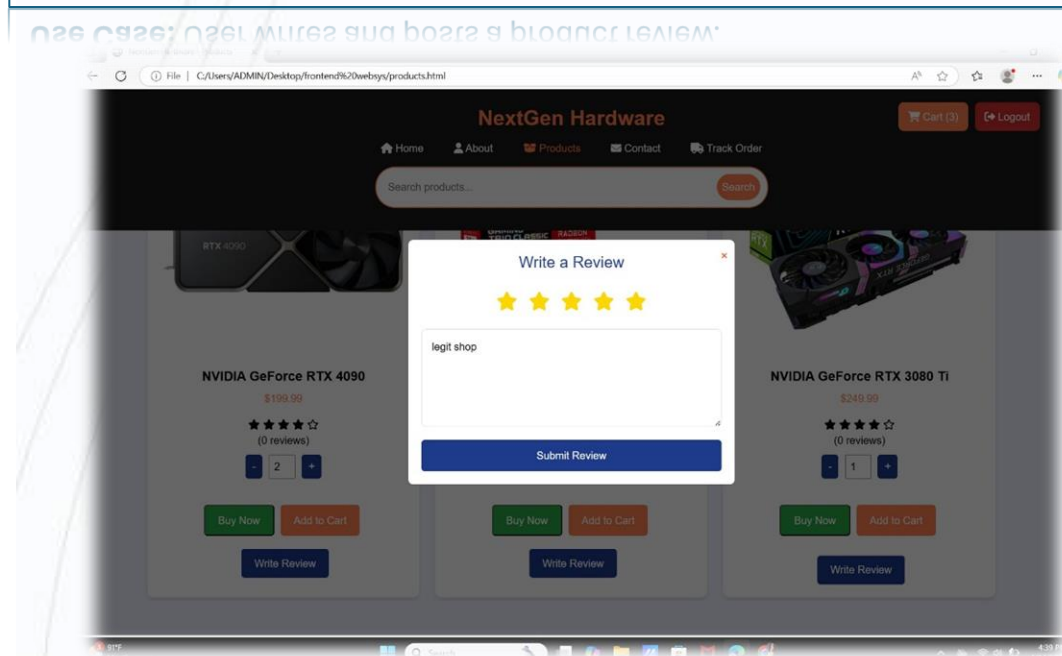

Use Case: User gives star ratings.

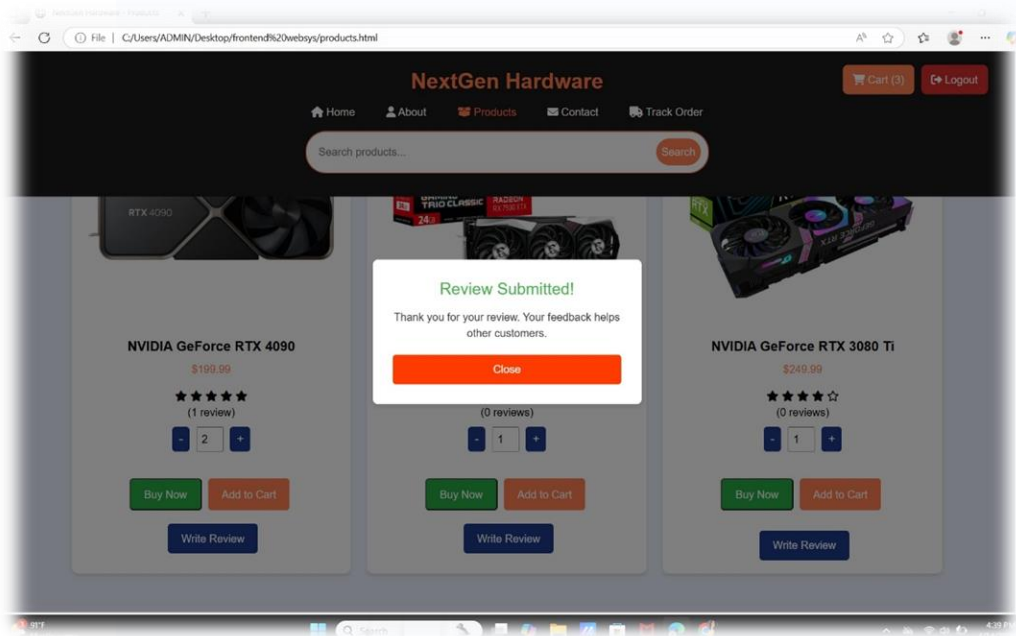

➤ Submitting a Product Review

Feature: User feedback

Use Case: User writes and posts a product review.

Members' Role Reflections in Phase 2

| Member | Role |
|----------------------|---------------------------------------|
| Yasmien Mae M. Llona | Project Manager |
| Maryan D. Lusantas | Frontend Developer |
| Catlyn L. Ruiz | Backend Developer |
| Yasmin M. Fermin | Database Manager |
| Niña Jezreen M. Bron | Github Manager |
| John Mark C. Idanan | Tester/Debugger/Documentation Officer |

YASMIEN MAE M. LLONA

Project Manager

As the project manager, I ensured that our frontend development aligned closely with the design documents from Phase 1, such as the ERD and use case diagrams. I coordinated with team members to divide tasks efficiently and maintain consistency across all pages using Bootstrap. Throughout the week, I reviewed each interface to ensure responsiveness and modularity, preparing them for future backend integration. I also monitored our GitHub activity to keep our commits organized and within the structured frontend workflow. This phase helped strengthen our teamwork and attention to detail in UI design.

Developing frontend interfaces taught me the process of transforming concepts into digital visual presentations with interactive functions. The HTML, CSS and JavaScript coding tools taught me to build web pages that users could navigate easily. The difficulties I faced with layout and responsiveness improved as I worked extensively and researched the subject. Using Flexbox alongside Bootstrap simplified the process of adding styles to and positioning visual elements on web pages. The practical experience exposed me to how design and functionality should harmonize in web development.

MARYAN D. LUSANTAS

Frontend Developer

CATLYN L. RUIZ

Backend Developer

As the backend developer, my role in Phase 2 was to ensure the frontend pages were aligned with the data structure and logic planned for the backend. I collaborated closely with the frontend developer to review forms and inputs, making sure they matched the fields defined in our ERD for a smooth API integration later. Although backend functionality was not implemented yet, I began outlining the routes, models, and controller logic needed for Phase 3. This phase helped me anticipate potential integration challenges and plan the backend flow accordingly.

During the second phase, I have not been able to do much work since I wasn't required or included in the specific team roles involved. My responsibilities as a database manager weren't heavily needed at this phase of the project. Nonetheless, I am still willing and available to help the team anytime they need assistance. I know the value of teamwork, and I'm prepared to contribute whenever my role becomes more relevant.

YASMIN M. FERMIN

Database Manager

NIÑA JEZREEN M. BRON

Github Manager

Handling the GitHub tasks for Phase 2 was pretty chill. Basically, I just had to upload the frontend files in there and tweak the README to show where we're at. Way less headache than last time, although there was one detail I needed to change. I renamed the screenshots 1-9 with leading zeroes to correct the sorting. It was a good reminder that keeping things organized and making sure everyone knows what's going on in the repo really pays off.

JOHN MARK C. IDANAN

During Phase 2 of our project, I worked as the Documentation Manager and focused on preparing the laboratory report for our e-commerce website, NextGen Hardware. I added clear notations for each feature and arranged them in order, from the Authentication Page to the Track Order Page, to reflect the actual user flow. This helped ensure that our documentation matched the system's structure and design. It also improved my ability to organize technical content and align it with our diagrams like the Use Case and ERD. Overall, this phase strengthened my understanding of both the system and the importance of proper documentation.

Tester/Debugger/ Documentation Officer
