II. JS CODE USED FOR API CONNECTION

a. cart.js

```
// Fetch cart items from backend
Windsurf: Refactor | Explain | ✕
async function fetchCartItems() {
  try {
    const response = await fetch('http://localhost:3001/api/cart', {
      headers: {
        'Authorization': 'Bearer ' + getAuthToken()
      }
    });
    if (!response.ok) throw new Error('Failed to fetch cart items');
    const data = await response.json();
    cart = data.map(item => ({
      _id: item._id,
      productId: item.productId._id,
      name: item.productId.name,
      price: item.productId.price,
      quantity: item.quantity,
      imgSrc: item.productId.image || ''
    }));
    updateCartUI();
  } catch (error) {
    console.error(error);
  }
}
```

b. review.js

```
Function to fetch and update product rating display from backend API
Windsurf: Refactor | Explain | ✕
async function updateProductRating(productId) {
  try {
    console.log('Fetching reviews for productId:', productId);
    const response = await fetch(`http://localhost:3001/api/reviews/${productId}`);
    if (!response.ok) {
      console.error('Failed to fetch reviews for product:', productId);
      return;
    }
    const reviews = await response.json();
    console.log('Reviews fetched:', reviews);

    // Update the rating display on the page
    const productContainer = document.querySelector(`[data-product-id="${productId}"]`);
    if (!productContainer) {
      console.warn('Product card not found for productId:', productId);
      return;
    }
    const card = productContainer.querySelector('.product-card');
    if (!card) {
      console.warn('Inner product card element not found for productId:', productId);
      return;
    }
  }
}
```

c. Inline js code used for API connection in products.html

```
const response = await fetch('http://localhost:3001/api/cart/count', {
  headers: {
    'Authorization': `Bearer ${token}`
  }
});

if (response.ok) {
  const count = await response.json();
  const cartBtn = document.querySelector('.cart-btn');
  if (cartBtn) {
    // If count is an object with count property, use count.count
    const displayCount = typeof count === 'object' && count.count !== undefined ? count.count : count;
    cartBtn.textContent = `Cart (${displayCount})`;
  }
} else {
  console.error('Failed to get cart count:', response.statusText);
  if (response.status === 401) {
    localStorage.removeItem('token');
    localStorage.removeItem('loggedInUser');
    alert('Session expired. Please log in again.');
```

```
function loadProducts(searchQuery) {
  try {

VI. MEMBERS' ROLE REFLECTIONS

Member	Role
Yasmien Mae M. Llona	Project Manager
Maryan D. Lusantas	Frontend Developer
Catlyn L. Ruiz	Backend Developer
Yasmin M. Fermin	Database Manager
Niña Jezreen M. Bron	Github Manager
John Mark C. Idanan	Tester/Debugger/Documentation Officer

YASMIEN MAE M. LLONA

Project Manager

This week, as the **Project Manager**, I coordinated our team to ensure each member understood their assigned tasks and deadlines. I regularly checked on everyone's progress and facilitated smooth collaboration between frontend and backend teams. I also reviewed our GitHub workflow to confirm that all updates were pushed and merged correctly. Overall, I helped keep our project organized and on track to meet the lab requirements.

In Phase 4, as the **Frontend Manager**, I was responsible for connecting our HTML forms to the backend API using JavaScript and the `fetch()` method. I handled form validation, submission, and displayed alerts based on success or error responses. I also improved the interactivity of our admin pages and simplified the interface to make it more user-friendly. Working closely with the backend developer helped ensure smooth communication between frontend and backend. This phase strengthened my skills in API integration and responsive UI design.

MARYAN D. LUSANTAS

Frontend Developer

CATLYN L. RUIZ

Backend Developer

As the **Backend Developer** during Phase 4, it was challenging for me working through this phase. My main contribution was ensuring that all POST routes were working properly so that the frontend could send data successfully. I tested endpoints like `/api/users` and `/api/products` using Postman to confirm they accepted the correct data and responded in JSON format. I also made sure that the data being inserted followed our MongoDB schema. It was fulfilling to see the connection between the frontend forms and our database come to life through my work.

As a **Database Manager**, I always ensure that the data I insert conforms to the specified schema to ensure consistency and prevent errors. When I view the data properly displayed in MongoDB Atlas, it assures me that the structure is correct, and the connection is functioning well. This process assures me that the database is performing as expected and future queries will execute smoothly.

YASMIN M. FERMIN

NIÑA JEZREEN M. BRON

I've grasped the core responsibilities of my role as the **GitHub Manager**, diligently pushing our frontend updates and backend files to our repository. However, a nagging feeling suggests I might be overlooking some aspects or implementing processes incorrectly, leading to a lack of complete confidence in my current contributions and overall management.

JOHN MARK C. IDANAN

Tester/Debugger/ Documentation Officer

As a **Documentation Officer** during phase 4, I was responsible for carefully documenting the workflow, which helped me understand the entire process in detail. I took clear screenshots and added detailed notes to ensure the report was both informative and easy to follow. This task improved my attention to detail and made me more organized. It also showed me how proper documentation can greatly support team communication and project tracking.
