P5: DISPLAYING & MANAGING DATA ON THE FRONT-END

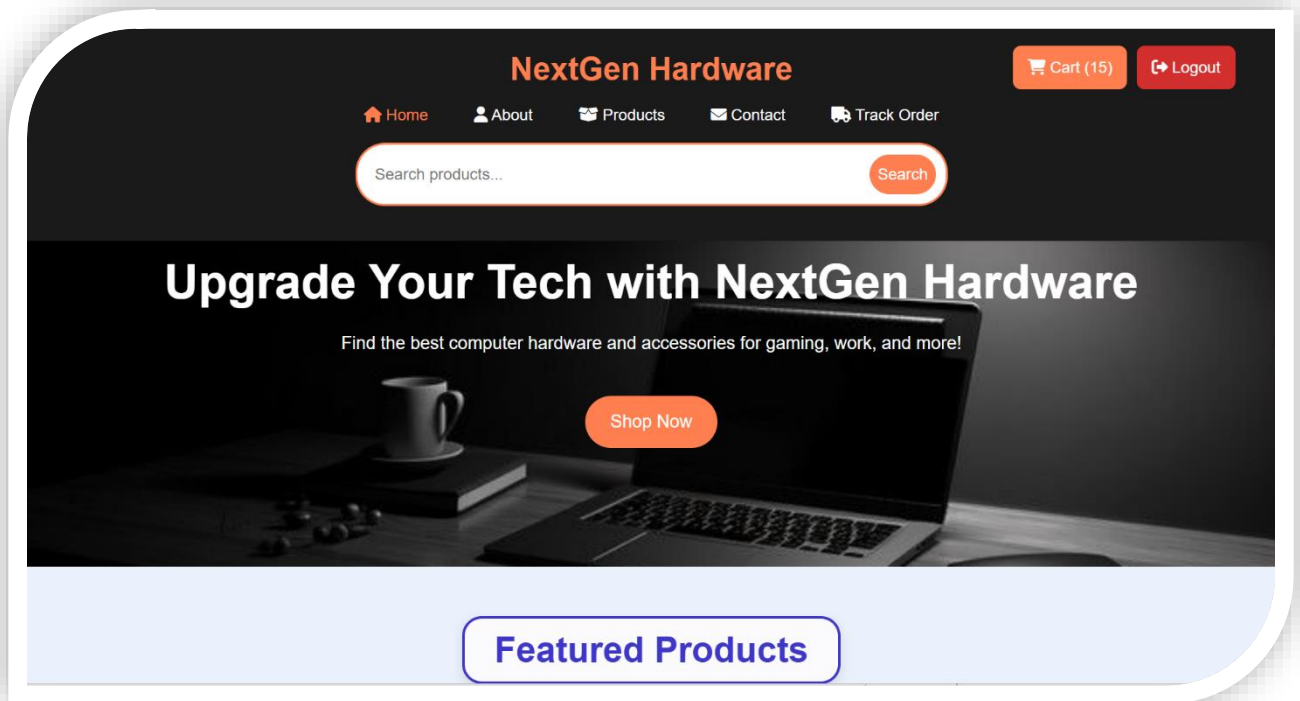

GROUP YOYO

Llona, Yasmien Mae M.
Lusantas, Maryan D.
Ruiz, Catlyn L.
Fermin, Yasmin M.
Bron, Niña Jezreen M.
Idanan, John Mark C.

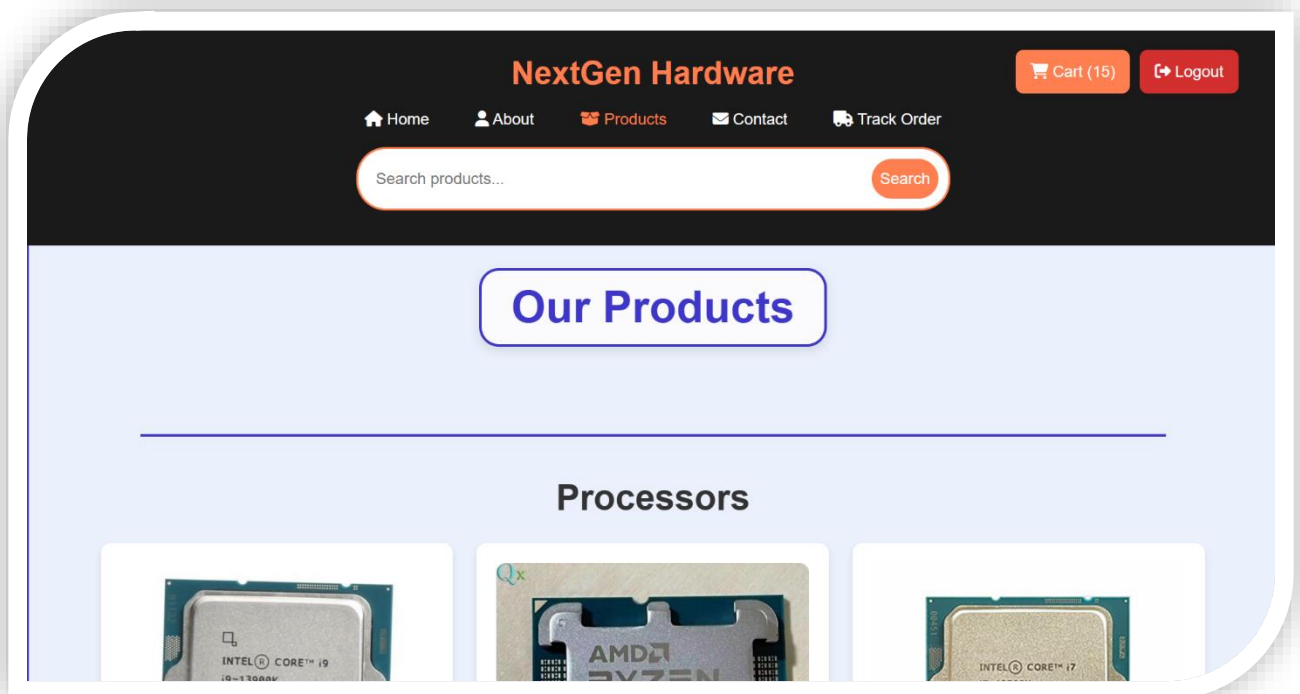

I. SCREENSHOT OF AT LEAST 2 DISPLAY PAGES

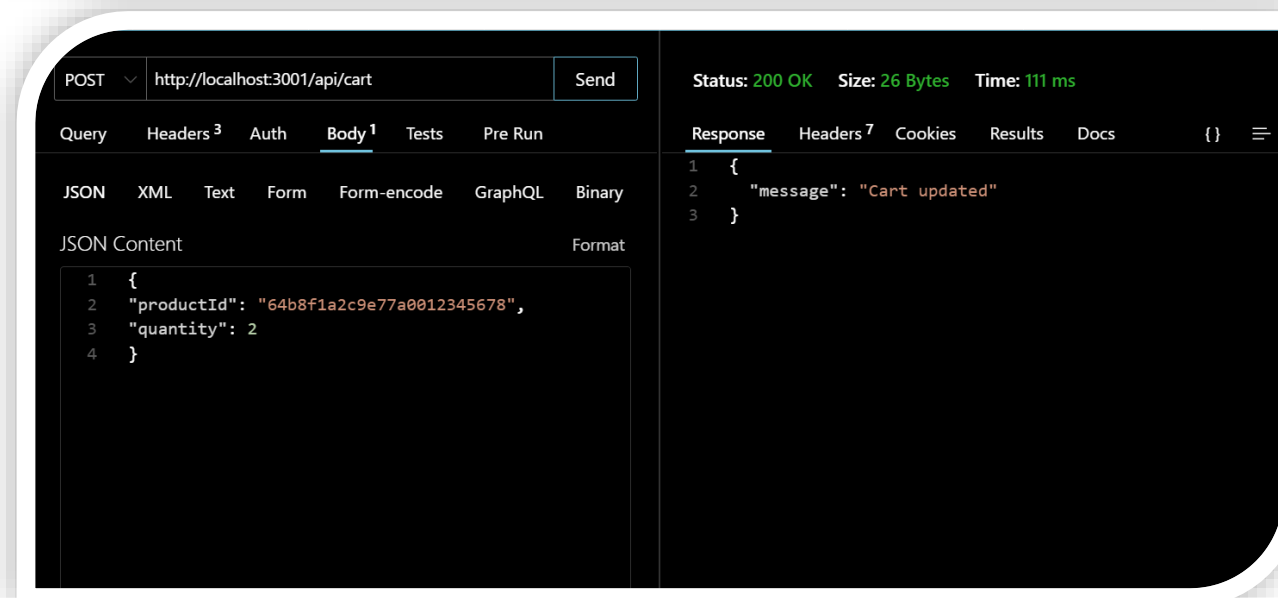

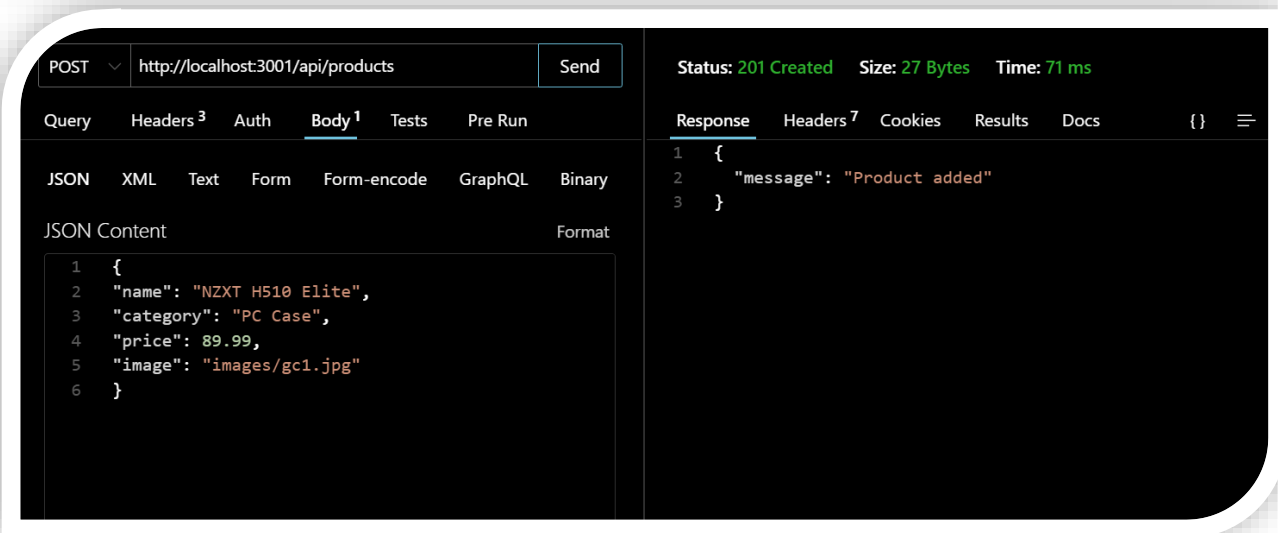

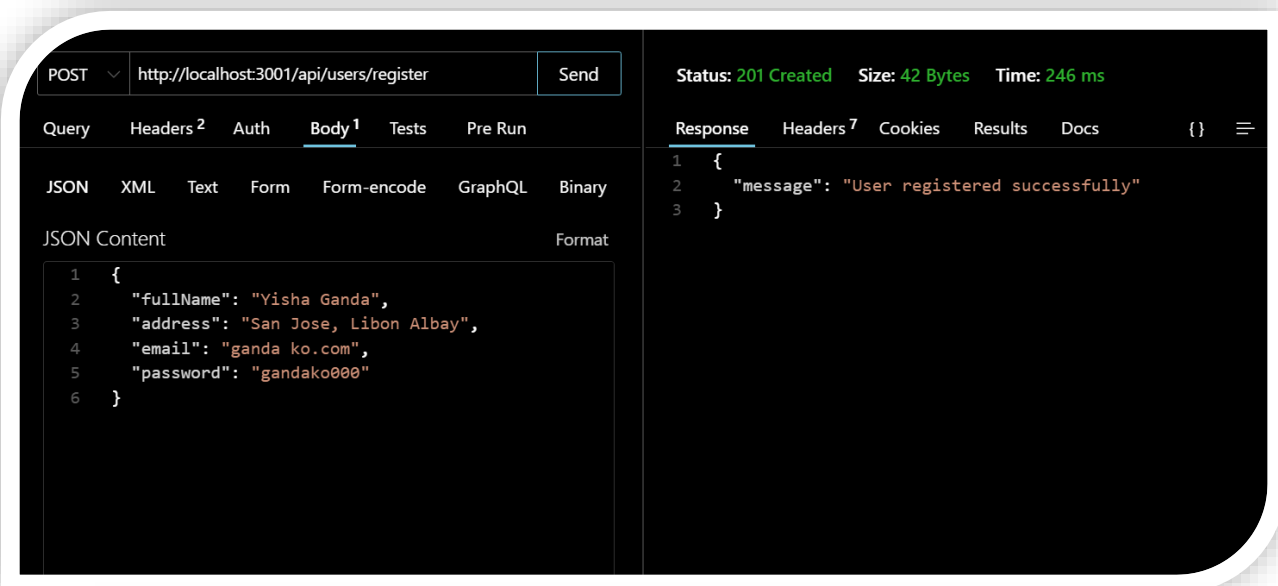

a. Homepage

Products page

II. SAMPLE BACKEND API RESPONSE (CONSOLE OR POSTMAN SCREENSHOT)

III. ANNOTATED JAVASCRIPT SNIPPET USED FOR RENDERING DATA

```
Fetch cart items from backend
async function fetchCartItems() {
  try {
    // Make a GET request to the server to fetch the cart items
    const response = await fetch('http://localhost:3001/api/cart', {
      headers: {
        // Include the authentication token in the request headers for authorization
        'Authorization': 'Bearer ' + getAuthToken()
      }
    });
    // Check if the response was successful (status 200)
    if (!response.ok) throw new Error('Failed to fetch cart items');

    // Parse the response as JSON (the cart data returned from the backend)
    const data = await response.json();

    // Map the response data to a format that will be used in the UI
    cart = data.map(item => ({
      _id: item._id,
      productId: item.productId._id,
      name: item.productId.name,
      price: item.productId.price,
      quantity: item.quantity,
      imgSrc: item.productId.image || ''
    }));

    // Update the UI with the fetched cart items
    updateCartUI();
  }
}
```

```
function to fetch and update product rating display from backend API
async function updateProductRating(productId) {
  try {
    // Log the product ID to confirm we're fetching reviews for the correct product
    console.log('Fetching reviews for productId:', productId);

    // Fetch reviews for the given productId from the backend API
    const response = await fetch(`http://localhost:3001/api/reviews/${productId}`);

    // Check if the response is OK (status 200), if not, log an error
    if (!response.ok) {
      console.error('Failed to fetch reviews for product:', productId);
      return; // Exit the function if fetching failed
    }

    // Parse the response data (reviews) as JSON
    const reviews = await response.json();
    console.log('Reviews fetched:', reviews); // Log the reviews data for debugging

    // Select the product container on the page using the productId
    const productContainer = document.querySelector(`[data-product-id="${productId}"]`);

    // Check if the product container exists on the page
    if (!productContainer) {
      console.warn('Product card not found for productId:', productId);
      return; // Exit if the product container was not found
    }

    // Find the specific product card inside the container
    const card = productContainer.querySelector('.product-card');
```

VI. MEMBERS' ROLE REFLECTIONS

Member	Role
Yasmien Mae M. Llona	Project Manager
Maryan D. Lusantas	Frontend Developer
Catlyn L. Ruiz	Backend Developer
Yasmin M. Fermin	Database Manager
Niña Jezreen M. Bron	Github Manager
John Mark C. Idanan	Tester/Debugger/Documentation Officer

YASMIEN MAE M. LLONA

Project Manager

As the **Project Manager** for Phase 5, I ensured that our team stayed aligned with the lab objectives, especially in testing and displaying backend data on the frontend. I coordinated the integration between the frontend and backend by regularly checking on progress and guiding the team in resolving issues with API responses and dynamic rendering. I also made sure that GitHub commits were properly tagged and that our updated files were well-organized. Overall, I helped maintain smooth communication and workflow so that we could meet our goals efficiently.

In Phase 5, as the **Frontend Developer**, my main responsibility was to display the data coming from our backend API on the frontend pages. I used JavaScript to fetch the data and render it dynamically into the interface using DOM manipulation. I made sure that the design remained clean and responsive while also adding simple loading and error messages for better user experience. Although I didn't handle the backend, I coordinated with our backend developer to ensure the correct API endpoints were used. This phase helped me improve my skills in rendering real-time data and making the UI more functional.

MARYAN D. LUSANTAS

Frontend Developer

CATLYN L. RUIZ

Backend Developer

As the **Backend Developer** for Phase 5, I was responsible for making sure all GET endpoints like `/api/users` and `/api/products` were working correctly and returning accurate JSON data. I used Postman to test each route and confirmed that the output matched our defined schema. I also made improvements to the controller functions to better support the needs of the frontend team. My main focus was to deliver consistent and well-structured data for dynamic display on the website.

Even though I wasn't officially assigned a team role during phase 5, I continued my task as the **Database Manager** to support the project's progress. I focused on creating Mongoose models, establishing a stable MongoDB connection, and ensuring the inserted data followed the defined schema. Seeing the data appear correctly in MongoDB Atlas reassured me that everything was functioning as expected.

YASMIN M. FERMIN

Database Manager

NIÑA JEZREEN M. BRON

Github Manager

As the **GitHub Manager** for Phase 5, my main contribution was ensuring smooth integration of frontend and backend changes by managing all pull requests and resolving any merge conflicts. I verified that all commits related to data retrieval and display were properly structured and tagged under *phase-5* for tracking. I also coordinated closely with both frontend and backend developers to maintain consistent project flow and updated the main branch only after successful testing. This phase strengthened my skills in collaborative version control and helped the team stay organized.

JOHN MARK C. IDANAN

Tester/Debugger/ Documentation Officer

During phase 5, my role as a **Documentation Officer, Tester, And Debugger** involved documenting the data output and capturing screenshots of real-time data rendering. This task helped me closely observe how the data flowed through the system and identify any inconsistencies or bugs. It also improved my skills in attention to detail and technical reporting. Overall, the experience taught me how important clear documentation and thorough testing are in ensuring the success of a project.
